

Asset Management Continuum for Sustainable Service Delivery

As understanding grows, local governments will progress incrementally along the Continuum.

Ground Zero: No Asset Management Plan exists. A consequence is unfunded infrastructure liability.

Step One: Local governments embrace the BC Framework, with an initial focus on core engineered assets, and embark on an asset management strategy.

Step Two: Local governments start thinking holistically and implement a life-cycle approach to infrastructure decision-making; sustainable service delivery for engineered assets becomes standard practice.

Step Three: Local governments integrate natural systems thinking and account for the water-balance services provided by watershed systems.
