

# Nested Concepts: How we change what we are doing on the landscape

## Context

### Land use surrounding the Salish Sea

The context for financial valuation of stream systems (ecological assets)

## Desired Outcome

- **Natural Asset Management**

A desired outcome in the built environment

## Framework

- **Science-based understanding of land use consequences**

A framework for balancing use and conservation of land

## Methodology & Metrics

- **Ecological Accounting Process (EAP)**

The methodology and metrics fill a gap and enable action by local governments

## Annual Budget

The annual budget for ongoing community investment in stream system management and maintenance.
