

# Water Balance Model Express:

## Training Workshop – November 29, 2012

### Workshop Overview

Learn How to Implement Green Infrastructure Practices that Reduce a Community's 'Water Footprint' at the Water Balance Model training workshop, hosted by the Capital Regional District (CRD). To register, visit the CivicInfo website: [Registration](#)

Learn core concepts, such as how to:

- lighten the 'water footprint';
- achieve more at less cost;
- adapt to climate change; and
- protect stream and watershed health

The 3-person teaching team will demonstrate how to use the **Water Balance Model Express and Drainage**

**Infrastructure Screening Tool**. In particular, Richard Boase will share the District of North Vancouver experience in applying these tools to support land development and infrastructure decisions. The afternoon segment will provide a hands-on opportunity in a computer lab setting (**please bring your own laptop**) for those participants who wish to delve into the HOW of the WBM Express.

### Who Should Attend

The workshop is an opportunity for planning, engineering and other local government staff - including managers and supervisors - to gain an understanding and appreciation of the speed and power of these tools in generating useful answers in minutes rather than in hours or days.

### Workshop Details
